Tyco Integrated Security’s ID Management solution helps streamline processes

In today’s environment of care, a hospital’s security solution provider needs to help solve business challenges, improve processes, reduce risk, support RSI requirements and bolster operational efficiencies to improve patient care.

The Tyco Integrated Security Identity Management Automation Process (IMAP), designed by Tyco Integrated Security in-house engineers, can meld hospital’s multiple disparate personnel and information systems so that any one point of data entry is required. The solution can automatically populate data across multiple systems, including human resources, payroll, time and attendance, contractor verification, and other systems.

Tyco Integrated Security IMAP can also enable access rights to be applied within a set of business rules. For example, when a new employee is entered into the human resources application and information systems so that only one point of data entry is required. The solution can automatically populate data across multiple systems, including human resources, payroll, time and attendance, contractor verification, and other systems.

Tyco Integrated Security IMAP solution can help serve as a starting point toward an integrated security program.

Tyco Integrated Security solutions for healthcare include:

- Safety Program Strategy Development
- Analog to Digital/IP Migration Strategy Development
- Access Control
- Video Surveillance
- RFID/Real-Time Location Systems
- Emergency Systems
- Intrusion Detection
- Remote Video Guard Tour & Doves Assistance

- Fire & Life Safety
- Workforce Management
- 24/7 Monitoring
- Tyco IP Solutions
- High Availability, Disaster Recovery and Redundancy of Centralized Solutions
- Infection Prevention
- Maintenance & Service Plans

The Tyco Integrated Security Management Automation Process

1. Data Feeds
2. Process Updates
3. Administer Updates
4. Retrieve Updates
5. Updated Data to Return
6. Diagnostic Deliverables

Tyco Integrated Security Healthcare Solutions

Strategic integrated security solutions that deliver best-in-class operational capabilities

As a leader in the security industry since 1874, Tyco Integrated Security Healthcare Solutions provides safety, security and IT integration services for over 800 acute-care, specialty and behavioral health hospitals in the U.S. Our approach merges security and technology solutions to help you address loss prevention, operational and risk management challenges while helping you improve the safety of personnel and patients.
Healthcare facilities face unique security challenges — ones that Tyco Integrated Security is ready to meet.

Providing physical security in a hospital can be challenging. The need to draw patients to your environment of care must be balanced with the potential volatility and sensitivity that accompanies the healthcare business. A hospital campus must be as open and inviting as a hotel, but as secure as a bank.

Hospitals are among the few institutions that never close, serving their communities 24/365. That means ensuring a safe environment for people throughout all facilities, including patients, visitors, staff, doctors, and suppliers. The facility’s multiple entrances, expansive treatment areas, courtyards and hallways, expensive equipment, transport, storage and distribution of pharmaceuticals and supplies and countless regulatory requirements present very unique, and critical, security challenges. That’s why there’s Tyco Integrated Security Healthcare Solutions.

Complete Security Management Solutions

Tyco Integrated Security Healthcare Solutions takes total security management planning to a new level to help meet the unique needs of the healthcare environment. Neglecting our expertise in security and technology, we work with your healthcare facility’s leadership team as well as its security and information technology infrastructure to understand and implement solutions that meet immediate needs and future needs. With a technology-centric focus and dedicated healthcare security and IT integration professionals, we can assist in addressing regulatory, operational, risk management, safety and loss prevention challenges.

Healthcare facility needs call for special qualifications

With new, ever-increasing risks and demands around patient safety and data safety, secure facilities have never been more paramount to healthcare providers. Our security implementations in healthcare institutions are an integrated strategy that can include the following:

- State regulatory compliance
- Joint Commission accreditation requirements
- HIPAA guidelines
- HHS Act regulations
- Patient and visitor safety
- Data security and integration
- Access control
- IT infrastructure and operational improvements

Integration expertise

The four Tyco Integrated Security Centers of Excellence, based in North America, support more than 200 sales and services offices and offer specialized services to ensure compliance with regulations of the Centers of Excellence: local technicians and members of the Tyco Integrated Security Advanced Integration and Technical Services team work side by side to integrate and certify advanced systems. These centers are able to provide security integrators with software, hardware, and services to ensure compliance with the Joint Commission and other regulatory bodies.

Security professionals must be able to comply with a variety of regulatory requirements, which can be challenging for the average installer. That is where Tyco Integrated Security’s expertise becomes critical. Our team of experts has worked with some of the largest healthcare providers to deliver solutions that have met all regulatory standards.

Financial and Service Benefits

Tyco Integrated Security’s financial model is based on performance. This strategy is designed to make the solution affordable and the process easier. Our financial services team provides a variety of options to help meet your business needs and objectives. Our contract and service models allow you to focus on what you do best and let us handle the rest.

Complete Security Management Solutions

Tyco Integrated Security’s Complete Security Management Solutions are tailored to meet the unique needs of each healthcare environment. From planning and assessment to systems integration to project management, we help you meet your strategic goals regardless of your specific security requirements. Our team of experts works with you to integrate technology into your existing infrastructure, ensuring that your facility is secure and efficient.

7

The leader in helping to secure healthcare’s “Environment of Care”

1. Administration Offices
   - Facilities secure access and surveillance of your entire and exits while managing visitors and vendors to help protect people, property, assets and vital information.

2. Emergency & Outpatient Facilities
   - A sensitive area in every hospital, the Emergency Department requires security that goes beyond traditional secure and video. Unified communications and emergency notification are critical to supporting the processes you implement to keep these areas safe and secure for your staff and patients.

3. Main Hospital Building
   - Even the best of traditional security systems do not address operational efficiency and are often an afterthought from the organization’s other security systems. Tyco Integrated Security implements systems that fit into your strategic security plan to help achieve the objectives of administration and key clinical personnel.

4. Research Facility
   - Tyco Integrated Security can help you enforce your procedures to ensure best practices and help secure sensitive information.

5. Teaching/Triaining Facility
   - In instances where a hospital operates a program with a local higher education institution, Tyco Integrated Security Healthcare Solutions partners with Tyco Integrated Security Higher Education Solutions to help provide a unified, integrated security solution. Coordination of access control functions across multiple facilities as well as mass notification can leverage Tyco Integrated Security’s campus-wide capabilities.

6. Behavioral Health Units
   - This sensitive area requires technology that enables response processes through unified communications and additional security considerations.

7. Walkways/Parking Lots & Garages/ Common Areas
   - These areas represent some of the most critical challenges and require detailed consideration. Do you need video escort for nurses during the off shifts? How should you handle emergency notification? Tyco Integrated Security can help guide you through these questions and others to find the security solutions that fit your needs.

8. Hospitals
   - Hospitals are among the few institutions that never close, serving their communities 24/365. That means ensuring a safe environment for people throughout all facilities, including patients, visitors, staff, doctors, and suppliers. The facility’s multiple entrances, expansive treatment areas, courtyards and hallways, expensive equipment, transport, storage and distribution of pharmaceuticals and supplies and countless regulatory requirements present very unique, and critical, security challenges. That’s why there’s Tyco Integrated Security Healthcare Solutions.

9. Complete Security Management Solutions
   - Tyco Integrated Security’s Complete Security Management Solutions are tailored to meet the unique needs of each healthcare environment. From planning and assessment to systems integration to project management, we help you meet your strategic goals regardless of your specific security requirements. Our team of experts works with you to integrate technology into your existing infrastructure, ensuring that your facility is secure and efficient.
